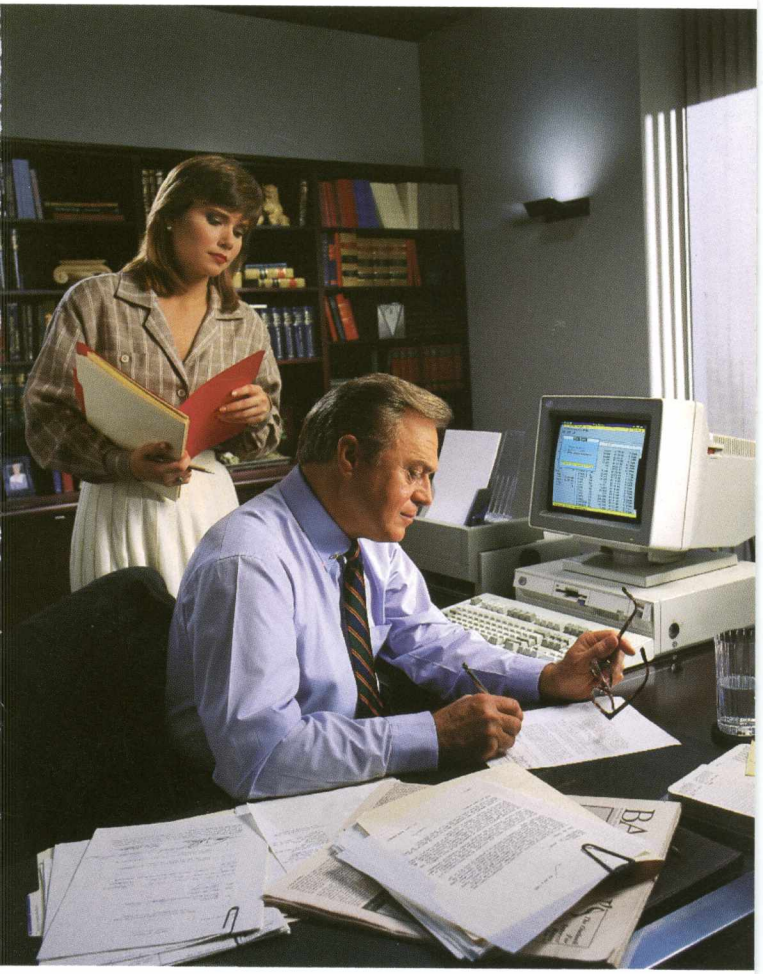
Right for today,
ready for tomorrow

Partners in personal computing:

IBM Personal System/2 Model 30 286 and IBM Disk Operating System (DOS) 4.0



IBM

The Bigger Picture

A hardware/ software team with plenty of drive

Team IBM Personal System/2® Model 30 286 with DOS 4.0 and you'll have a fast and friendly solution that can put you on the track to higher productivity. Designed for ease of use, this Personal System/2 and operating system are powerful partners that can help you do more in less time.

Model 30 286 packs important PS/2® features—including 80286 processing power, VGA graphics, up to 4Mb of memory on the system board, and much more. From its wealth of integrated functions to its 20Mb fixed disk,[1] this system is built to help bring out your best—in business, in education, in all the work you do.

DOS 4.0 taps the power of PS/2 Model 30 286 and turns it into top performance. At the same time, it makes tasks like calling up programs and copying files easier to do. In fact, thanks to DOS 4.0's user-friendly menus, you can perform many computing tasks by merely pressing a key or clicking a mouse.

Get set in a hurry

With Model 30 286, practically all you do to get started is plug in and turn on the power. Convenient ports make it easy to connect your display, printer and keyboard—without installing cards or setting switches. And an online tutorial introduces Model 30 286's features and functions in a clear and graphic way. So even if you're completely new to computing, you'll be ready to make the most of Model 30 286 in no time at all.

[1] Also available as Model 8530-E01 without a fixed disk through IBM Authorized Dealers.

DOS 4.0 is the ideal running mate to help you do just that. Like Model 30 286, it's designed to give you a fast and easy start. It comes with a special utility that makes installing and even customizing the operating system simple. It also features online Help facilities that give you quick answers and assistance whenever you need. All it takes is the touch of a key to bring explanations of DOS utilities and functions into view.

Count on compatibility

Just as important as the quick start and user-friendly features that Model 30 286 and DOS 4.0 offer is the compatibility they provide with:

- Many of the software programs and files you want to continue to use
- Many of the feature cards and adapters from your IBM Personal Computer ATs® or Personal Computer XTs™
- Printers, scanners, or a wide variety of peripherals that you currently use

With Model 30 286 and DOS 4.0, the value of resources like these can remain high. And you can continue using these resources for years to come.

Face the future with confidence

While helping to protect your past investment, Model 30 286 and DOS 4.0 also put you in position for the future. So no matter how fast your computing needs change, you'll be equipped to maintain your competitive edge.

When your business expands, you can expand both your business programs and your computing system to keep pace. Simply boost Model 30 286's memory to 4Mb on the system board. Or add up to 12Mb of memory with the new IBM Personal System/2 Multifunction Adapter. Then take advantage of this expanded memory to support large, sophisticated programs and even multitasking applications with IBM Operating System/2™ Standard Edition 1.1.

Another possibility: Add more computing power to your office by bringing in another PS/2—or several. Connect Model 30 286 and these new systems in a network, and you'll be able to share files and programs companywide.

Find out more about these partners in personal computing

Ask your IBM marketing representative or your IBM Authorized Dealer for additional information about the many benefits Model 30 286 and DOS 4.0 offer. You'll also find out more about how this hard-working hardware/software team is right for today and ready for tomorrow.
